

# Eye Disease

## ALAA Breeder Option & Do Not Breed Categories for the Labradoodle & Australian Labradoodle

### **Breeder Option:**

Persistent pupillary membranes, iris-to-iris  
Chronic superficial keratitis / Pannus  
Corneal degeneration  
Corneal dystrophy – epithelial/stromal  
Corneal dystrophy – posterior polymorphous  
Distichiasis  
Ectropion  
Entropion  
Exposure keratopathy syndrome / macroblepharon  
Imperforate lacrimal punctum  
Iris cysts  
Optic nerve – micropapilla  
Persistent hyaloid artery (PHA)  
Prolapsed gland of the third eyelid  
Retinal dysplasia – folds  
Vitreous degeneration

### **Do Not Breed:**

Cataract  
Central progressive retinal atrophy (CPRA)  
Glaucoma  
Iris melanoma  
Keratoconjunctivitis sicca / Dry eye  
Microphthalmia  
Microphthalmia with multiple congenital ocular defects  
Optic nerve hypoplasia  
Persistent hyperplastic primary vitreous (PHPV)  
Persistent hyperplastic tunica vasculosa lentis (PHTVL)  
Pigmentary uveitis  
Retinal atrophy – generalized  
Retinal dysplasia – folds/geographic/detachment (with skeletal defects)  
Retinal dysplasia – geographic, detached  
Retinal dysplasia – without skeletal defects  
Persistent pupillary membranes (all except iris-to-iris)
